## 3-1 High Speed Multifunction Board

### PCI-2602U NEW

Universal PCI , 1 MS/s High-speed, 16-channel Analog Input, 2-channel Analog Output and 32-channel DI/O Multifunction Board

#### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- Supports Card ID (SMD Switch)
- 2-channel 16-bit Voltage Output
  - 512-sample Hardware FIFO for Analog Pattern Generator
- 32-channel Programmable DI/O
  - Supports DO Status Readback (Register Level)
  - 512-sample Hardware FIFO for Digital Pattern Generator
  - Digital Input Filter Function
- 16 Single-ended/8 Differential Analog Input Channels
  - 16-bit ADC with Max. 1 MS/s Sampling Rate
  - 8192-sample Hardware FIFO for Analog Input
  - Supports Variety of Programmable AD Trigger Mode
  - AD Data Transfer: Polling, Interrupt, DMA
  - AD R/L Filter Function
  - AD Continuous Capture
  - AD Auto-calibration Function

#### Introduction

The PCI-2602U is a high-performance multifunction card that provides Analog and Digital I/O functions for high-speed data transfer, analog signal measurement, I/O control and pattern generation applications, etc. The card features a continuous, 1 MS/s 16-bit resolution AD converter, an 8 K-sample hardware FIFO, a 2-channel 16-bit DA converter, and 32-channel programmable Digital I/O with Digital Output readback. The PCI-2602U provides either 16-channel single-ended or 8-channel differential Analog Input, which is selectable via software, and is equipped with a high speed PGA featuring programmable gain.

In addition, the PCI-2602U card also provides the following advantages:

##### ① Card ID

The PCI-2602U also includes an onboard Card ID that enables the board to be recognized via software if two or more PCI-2602U cards are installed in the same computer.

##### ② Programmable Digital Input Filters (DI)

Programmable Digital Input filters can be employed to remove noise, glitches, and spikes on Digital Input ports, as well as to denounce the signal from the switch and relays in noisy industrial environments to prevent false readings caused by noise. The filter for the Digital Input channel can be configured by setting the filter time in seconds, preventing invalid readings and false triggers related to status change detection events.

##### ③ Analog Pattern Generator (DA)

The PCI-2602 can be used to generate arbitrary wave shapes on a single Analog Output port based on user-defined waveform patterns. The Analog Pattern Generator operates at a full 20 MHz rate and is suitable for control systems or radar simulation, etc. The user-defined waveform pattern is stored in the onboard memory with a length of 512 samples of 16-bit data for simple- or complex-pattern applications.

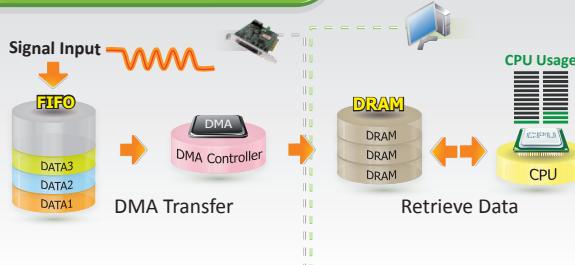

##### ④ Digital Pattern Generator (DO)

The PCI-2602U can be used to continuously output a digital pattern on the Digital Output port by utilizing a user-defined data pattern and rate that is based on 100 ns high-resolution timing (10 MHz).

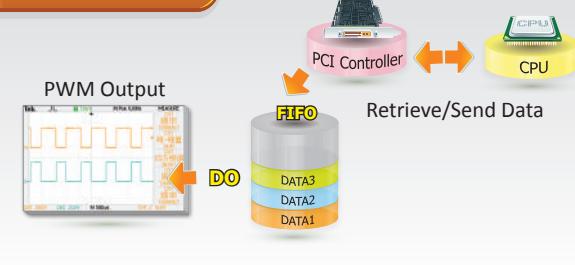

3

1

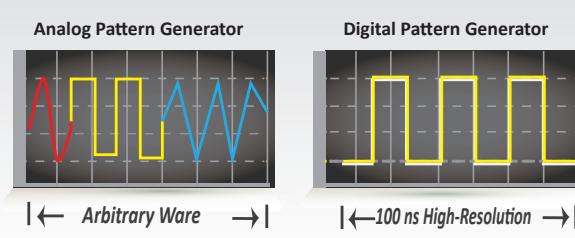

#### AD DMA Operation

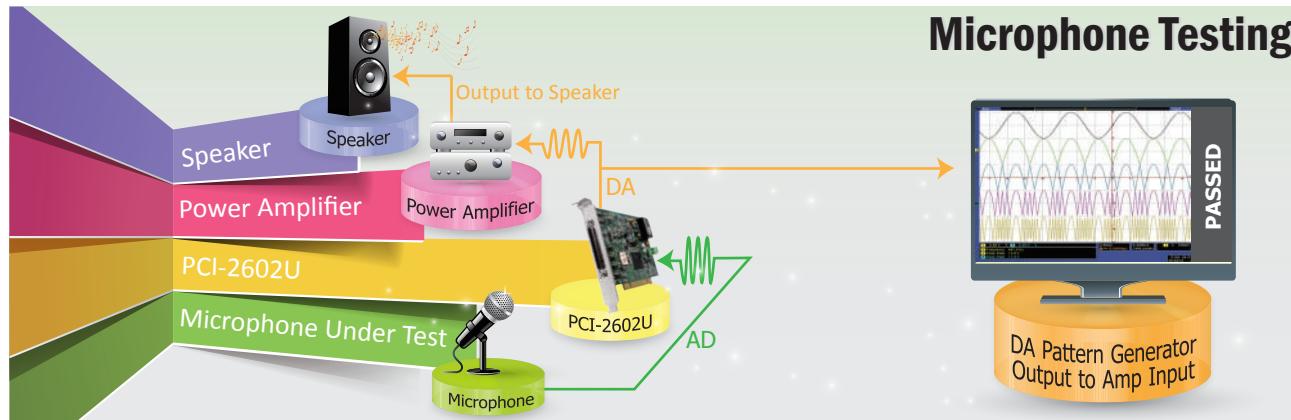

#### DO FIFO

#### Pattern Generator

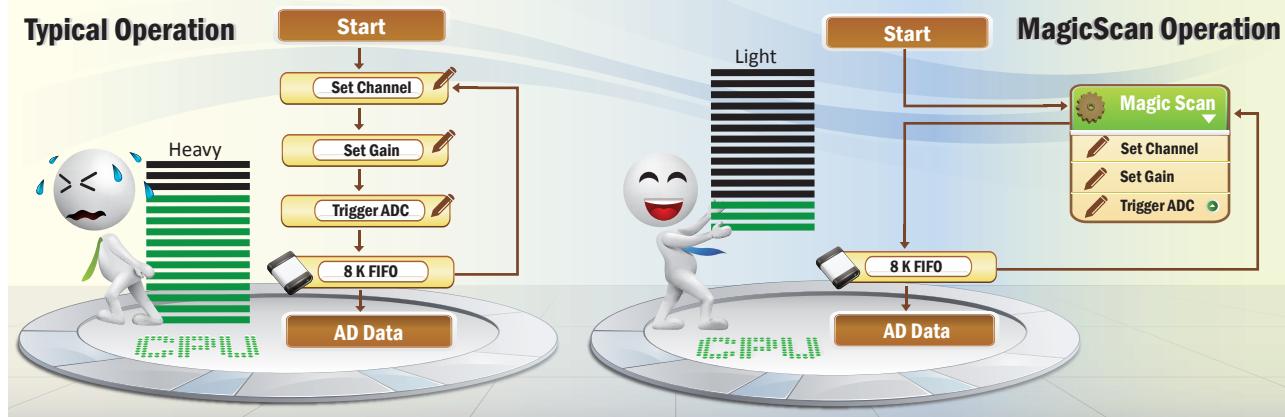

### ⑥ AD Continuous Capture

PCI-2602U provides the AD continuous capture function. The continuous capture refers to the acquisition of an unspecified number of samples. Instead of acquiring a set number of data samples and stopping, a continuous acquisition continues until you stop the operation.

3

1

PCI Bus Data Acquisition Boards

### ⑦ Pulse Width Modulation (PWM, DO)

PCI-2602U is capable of producing PWM signals. PWM signals can be generated as a digital signal, using digital output line(s) from PA. PWM signals are most commonly used to control from controlling valves or pumps to adjusting the brightness of an LED.

### ⑧ SCSI II Connector

PCI-2602U provides a single SCSI II 68-pin high-density connector that reduces the required installation space and slot of the card in the computer and incorporates 32 programmable Digital I/O channels, 16 analog input channels and 2 analog output channels.

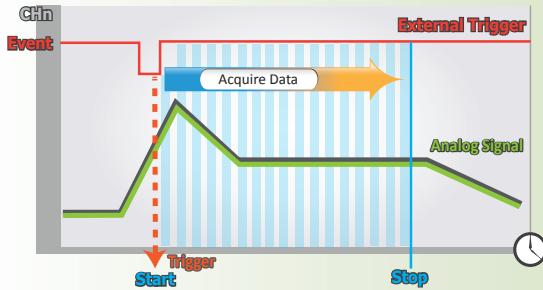

### ④ AD External Trigger

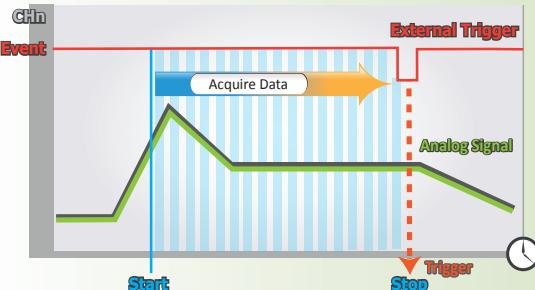

Synchronization of the data acquisition process relative to an external event is an important criterion in many applications. For example, user may want to collect data after receiving a pulse signal from an encoder or when the temperature of a chamber exceeds a critical value. In such instances, the PCI-2602U must be set up to start the ADC as soon as the external event, or trigger, occurs. PCI-2602U supports both analog and digital triggers.

#### ■ Digital Trigger: Post-trigger, Middle-trigger, Pre-trigger and Delay-trigger

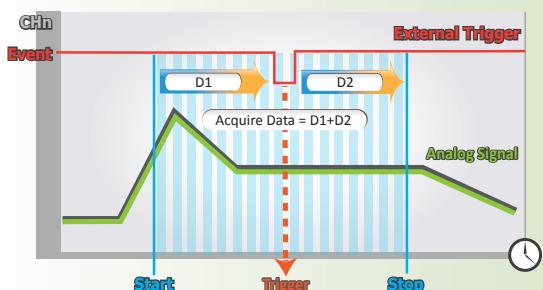

- **Post-trigger Mode:** In post-trigger mode, the signals are digitized after a trigger condition occurs.

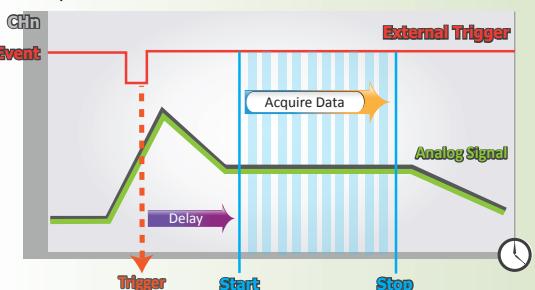

- **Pre-trigger Mode:** In pre-trigger mode, the signals are digitized before a trigger condition occurs.

- **Middle-trigger Mode:** In middle-trigger mode, the signals are digitized both before and after a trigger condition occurs.

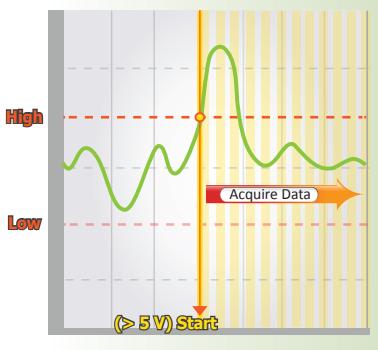

- **Delay-trigger Mode:** In delay-trigger mode, signal capture begins once the programmed delay period from the trigger has elapsed.

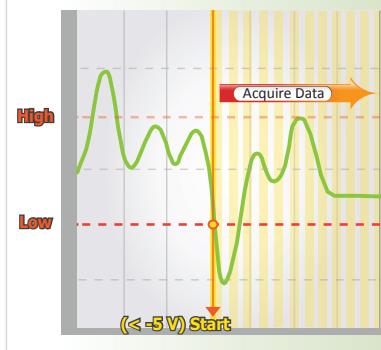

#### ■ Analog Trigger: There are six different types of analog trigger, as illustrated below:

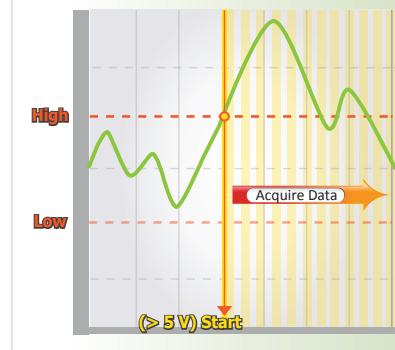

- Type 1: Above High

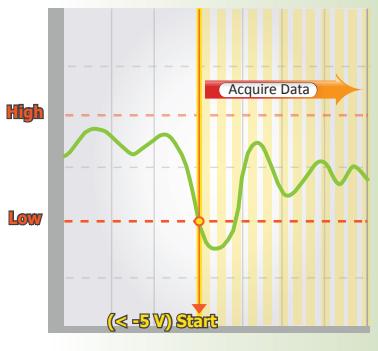

- Type 2: Below Low

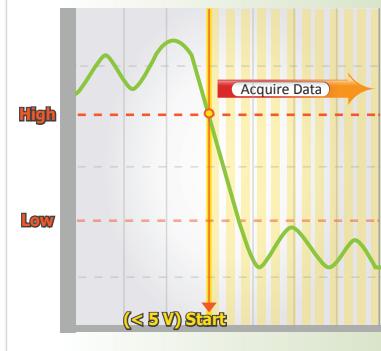

- Type 3A: Leave-region

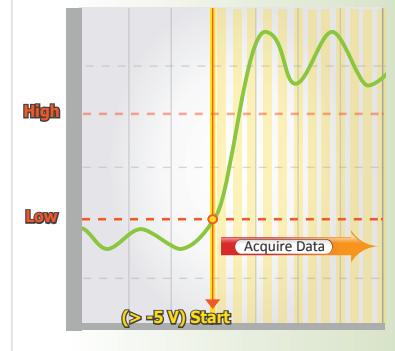

- Type 3B: Leave-region

- Type 4A: Entry-region

- Type 4B: Entry-region

## Software

### Drivers

- 32/64-bit Windows XP/2003/2008/Vista/7/8

### Sample Programs

- LabVIEW Toolkit
- VB/VC/Delphi/BCB/VB.NET/C#.NET/VC.NET/MATLAB Demo

## Hardware Specifications

### Analog Input

Channels	16 Single-ended/8 Differential
AD Converter	16-bit, 1 $\mu$ s conversion time
Sampling Rate	1 MS/s (Max.)
FIFO Size	8192 Samples
Bipolar Range	$\pm 10.24$ V, $\pm 5.12$ V, $\pm 2.56$ V

### Analog Output

Channels	2
Resolution	16-bit
FIFO Size	512 Samples
Output Rate	20 MS/s (Max.)
Output Range	$\pm 10$ V, $\pm 5$ V, $\pm$ EXT_REF, 0 ~ $+10$ V, 0 ~ $+5$ V, 0 ~ EXT_REF

### Programmable Digital I/O

Channels	32 (4-port Programmable)
----------	--------------------------

### Digital Input

Compatibility	5 V/TTL
FIFO Size	512 Samples
Input Voltage	Low: 0.8 V Max.; High: 2.0 V Min.

### Digital Output

Compatibility	5 V/CMOS
DO FIFO Size	512 Samples
Output Voltage	Logic 0: 0.4 V Max.; Logic 1: 2.4 V Min.
Output Voltage	Sink: 6 mA @ 0.33 V Source: 6 mA @ 4.77 V

### General

Bus Type	3.3 V/5 V Universal PCI, 32-bit, 33 MHz
Card ID	Yes (4-bit)
Connectors	Female SCSI II 68-pin x 1
Power Consumption	1 A @ +5 V (Max.)
Operating Temperature	0°C to +60°C
Humidity	5 to 85% RH, Non-condensing

## Ordering Information

PCI-2602U CR	Universal PCI, 1 MS/s High-Speed, 16-channel Analog Input, 2-channel Analog Output and 32-channel DI/O (RoHS)
--------------	---

## Accessories

DN-68A CR	DIN-Rail Mountable I/O Connector Block with 68-pin SCSI II Female Connector. (RoHS)

## 3-2 Multifunction Boards

### PCI-822LU/PCI-826LU

Universal PCI, 250 kS/s , 32-channel 12-/16-bit AD, 2-channel 16-bit DA and 32-channel Programmable DI/O Multifunction Board

#### Features ►►►

- Universal PCI (3.3 V/5 V) Interface
- Supports Card ID (SMD Switch)
- 32 Single-ended/16 Differential Analog Input Channels
  - 12-bit 250 kS/s High-speed AD for PCI-822LU
  - 16-bit 250 kS/s High-speed AD for PCI-826LU
- Built-in MagicScan Controller
- Supports Software-trigger and Pacer-trigger
- 8 K-sample Hardware FIFO
- 2-channel, 16-bit Analog Output
- 32-channel programmable DI/O
  - Pull-high and Pull-low Resistors for DI Channels
  - Supports Digital Output Status Readback (Register Level)

#### Introduction

The PCI-822LU/826LU is a series of multifunction boards that provides high-speed Analog and Digital I/O functions, and features a continuous 250 kS/s, 12- or 16-bit resolution AD converter, an 8-kSample hardware FIFO, a 2-channel, 16-bit DA converter, and 32 programmable Digital I/O channels with DO readback. The PCI-822LU/826LU series provides either 32 single-ended or 16 differential Analog Input channels that are jumper selectable, and is equipped with a high-speed PGA featuring programmable gain (1, 2, 4 or 8).

The PCI-822LU/826LU series also includes an onboard Card ID switch that enables the board to be easily recognized via software if two or more boards are installed in the same computer. The pull-high/low jumpers allow the DI status to be predefined instead of remaining floating if the DI channels are disconnected or interrupted.

The PCI-822LU/826LU series includes an AD channel scan function called MagicScan, which eliminates the majority of the effort required to acquire AD values, such as selecting the channel, setting the gain values and the settling time, triggering the ADC, and acquiring the data. Using the built-in MagicScan and the interrupt features, these complex tasks are effectively offloaded from the CPU. Even in MagicScan mode, a different gain code can be used for each channel, and the sampling rate can still reach a total of 250 kS/s, making the PCI-822LU/826LU series especially suitable for high-end applications.

## **PCI-1802LU/PCI-1802HU**

Universal PCI, 32-channel, 12-bit, 330 or 44 kS/s  
Multifunction Board (8 K word FIFO)

## Features ►►►

- Universal PCI (3.3 V/5 V) Interface
  - Supports Card ID (SMD Switch)
  - 2-channel, 12-bit Analog Output
  - 16-channel 5 V/TTL Digital Output
  - 16-channel 5 V/TTL Digital Input
    - Pull-high and Pull-low Resistors for DI Channels

- 32 Single-ended/16 Differential Analog Input Channels
    - 12-bit, 330 kS/s or 44 kS/s AD Converter
    - Built-in MagicScan Controller
    - Internal Trigger: Software-trigger, Pacer-trigger
    - External Trigger: Post-trigger, Pre-trigger, Middle-trigger
  - High-speed data transfer rate up to 2.7 M words/sec.

## Introduction

The PCI-1802LU/HU card is designed as an easy replacement for the PCI-1802L/H without requiring any modification to the software or the driver.

The PCI-1802LU/HU is a high-performance multifunction card that provides high-speed Analog and Digital I/O functions. The PCI-1802LU/HU is based on the Universal PCI interface, supporting both the 3.3 V and the 5 V PCI bus, and features a continuous 330 kS/s or 44 kS/s 12-bit resolution A/D converter, an 8 K-sample hardware FIFO, a MagicScan controller (for multi-channel scanning), a 2-channel 12-bit DA converter, and 16-channel Digital Input and 16-channel Digital Output.

The PCI-1802LU/HU provides either 32-channel single-ended or 16-channel differential Analog Inputs that are jumper selectable, and a programmable high-speed PGA that is equipped for gain controls (0.5/1/2/4/8 for Low Gain, and 0.5/1/5/10/50/100/500/1000 for High Gain).

The PCI-1802LU/HU also includes an onboard Card ID switch and pull-high/low DI resistors. The Card ID enables the board to be recognized via software if two or more PCI-1802LU/HU cards are installed in the same computer. The pull-high/pull-low resistors allow the DI status to be predefined instead of remaining floating if the DI channels are disconnected or interrupted.

#### Ordering Information

PCI-1802LU CR	Universal PCI, 32-channel, 12-bit, 330 kS/s Low Gain Multifunction DAQ Board (RoHS). Includes one CA-4002 D-sub Connector.
PCI-1802HU CR	Universal PCI, 32-channel, 12-bit, 44 kS/s High Gain Multifunction DAQ Board (RoHS). Includes one CA-4002 D-sub Connector.

## PCI-1800LU/PCI-1800HU

Universal PCI, 16-channel, 12-bit, 330 or 44 kS/s  
Multifunction Board (1 K word FIFO)

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- Supports Card ID (SMD Switch)
- 2-channel, 12-bit Analog Output
- 16-channel 5 V/TTL Digital Output
- 16-channel 5 V/TTL Digital Input
- Pull-high and Pull-low Resistors for DI Channels

- 16 Single-ended/8 Differential Analog Input Channels
  - 12-bit, 330 kS/s or 44 kS/s AD Converter
  - Built-in MagicScan Controller
  - Internal Trigger: Software-trigger, Pacer-trigger
  - External Trigger: Post-trigger, Pre-trigger, Middle-trigger
- High-speed data transfer rate up to 2.7 M words/sec.

### Introduction

The PCI-1800LU/HU card is designed as an easy replacement for the PCI-1800L/H without requiring any modification to the software or the driver.

The PCI-1800LU/HU is a high-performance multifunction card that provides high-speed Analog and Digital I/O functions. The PCI-1800LU/HU is based on the Universal PCI interface, supporting both the 3.3 V and the 5 V PCI bus, and features a continuous 330 kS/s or 44 kS/s 12-bit resolution AD converter, a 1 K-sample hardware FIFO, a MagicScan controller (for multi-channel scanning), a 2-channel 12-bit D/A converter, and 16-channel Digital Input and 16-channel Digital Output.

The PCI-1800LU/HU provides either 16-channel single-ended or 8-channel differential Analog Inputs that are jumper selectable, and a programmable high-speed PGA that is equipped for gain controls (0.5/1/2/4/8 for Low Gain, and 0.5/1/5/10/50/100/500/1000 for High Gain).

The PCI-1800LU/HU also includes an onboard Card ID switch and pull-high/pull-low DI resistors. The Card ID enables the board to be recognized via software if two or more PCI-1800LU/HU cards are installed in the same computer. The pull-high/pull-low resistors allow the DI status to be predefined instead of remaining floating if the DI channels are disconnected or interrupted.

## Introduction

The PCI-1602U/FU is a high-performance multifunction card providing high-speed Analog and Digital I/O functions. The PCI-1602U/FU is based on the Universal PCI interface, supporting both the 3.3 V and the 5 V PCI bus, and features a continuous 100 KS/s (200 KS/s for the F version) 16-bit resolution AD converter, an 8 K-sample hardware FIFO, a MagicScan controller (for multi-channel scanning), a 2-channel 16-bit DA converter, and 16-channel Digital Input and 16-channel Digital Output.

The PCI-1602U/FU provides either 32-channel single-ended or 16-channel differential Analog Inputs that are jumper selectable, and a programmable high-speed PGA that is equipped for gain controls (1, 2, 4 and 8). The PCI-1602U/FU is fully compatible with the PCI-1602/F, and is designed as a direct replacement without requiring any modification to the software or the driver.

The PCI-1602U/FU also includes an onboard Card ID switch that enables the board to be recognized via software if two or more PCI-1602U/FU cards are installed in the same computer. The pull-high/low resistors allow the DI status to be predefined instead of remaining floating if the DI channels are disconnected or interrupted.

  - External Trigger: Post-trigger, Pre-trigger, Middle-trigger
- High-speed data transfer rate up to 2.1 M words/sec.

### Introduction

The PCI-1202 series is a family of high performance data acquisition boards that feature continuous gap-free data acquisition in DOS at 110 kHz for low gain or 44 kHz for high gain. The PCI-1202 family has the same hardware architecture as the PCI-1802, and provides 32-channel single-ended or 16-channel differential Analog Inputs. As with the PCI-1802 family, the PCI-1202 series features both the Magic Scan and Continuous Capture functions.

The PCI-1202LU/HU Universal PCI card supports both the 3.3 V and the 5 V PCI bus. The PCI-1202LU/HU cards are fully compatible with PCI-1202L/H cards and are designed as direct replacements without requiring any modification to the software or the driver, with the main difference being the addition of DI pull-high/low resistors and a Card ID switch on the PCI-1202LU/HU.

The PCI-1202LU/8K and PCI-1202HU/8K cards are equipped with an 8K-sample hardware FIFO that reduces data overflow issues in multi-tasking environments such as Windows and Linux.

# PCI-1002LU/PCI-1002HU

Universal PCI, 32-channel, 12-bit, 110 or 44 kS/s

Multifunction Board

## Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 32 Single-ended/16 Differential Analog Input Channels
  - 12-bit, 110 kS/s or 44 kS/s AD Converter
  - Internal Pacer-trigger
- 16-channel 5 V/TTL Digital Output
- 16-channel 5 V/TTL Digital Input
  - Pull-high and Pull-low Resistors for DI Channels
- Supports Card ID (SMD Switch)

## Introduction

The PCI-1002LU/HU card is designed as an easy replacement for the PCI-1002L/H without requiring any modification to the software or the driver.

The PCI-1002LU/PCI-1002HU is an AD board that supports both the 3.3 V and the 5 V PCI bus and features low gain Analog Input at 110 kS/s or high gain at 44 kS/s. The PCI-1002LU/PCI-1002HU provides 32 single-ended or 16 differential 12-bit Analog Input channels, 16 Digital Input channels, and 16 Digital Output channels. The pull-high/low resistors allow the DI status to be predefined instead of remaining floating if the DI channels are disconnected or interrupted.

|--|---|

### Introduction

The PIO-821LU/HU card is designed as an easy replacement for the PIO-821L/H without requiring any modification to the software or the driver.

The PIO-821LU/HU is a multifunction board for PC/AT compatible computers. The PIO-821LU provides for low gain (1, 2, 4, 8), and the PIO-821HU supports high gain (1, 10, 100, 1000). The PIO-821L/H contains a 12-bit ADC with up to 16 single-ended or 8 differential Analog Input channels. The cards also have a 12-bit DAC voltage output and 16 TTL-compatible Digital Input and Digital Output channels, respectively. The maximum sampling rate for the AD converter is around 45 kS/s.

The PIO-821LU/HU also includes an onboard Card ID switch and pull-high/low DI resistors. The Card ID enables the board to be recognized via software if two or more PIO-821LU/HU cards are installed in the same computer. The pull-high/pull-low resistors allow the DI status to be predefined instead of remaining floating if the DI channels are disconnected or interrupted.

## PISO-DA2U

Universal PCI, 12-bit, 2-channel Isolated Analog Output Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 12-bit, 2-channel Analog Output
  - 3750 V<sub>DC</sub> Bus and Channel Isolation Protection
  - 3000 V<sub>DC</sub> Power Isolation Protection
  - Unipolar or Bipolar Analog Output
- Software Calibration
- Two Timer-triggered Interrupt Sources
- Calibration data stored in EEPROM
- Double-buffered DA Latch
- Supports Card ID (SMD Switch)

### Introduction

3

3

The PISO-DA2U has 2 Analog Output channels with high-voltage isolation protection and is based on the Universal PCI interface (3.3 V/5V). The PISO-DA2U is fully compatible with the PISO-DA2, and is designed as a direct replacement without requiring any modification to the software or the driver.

The built-in high-quality isolation components on the PISO-DA2U provide 3750 V<sub>DC</sub> bus-type and channel-to-channel isolation, and offer durable abilities. The voltage output range for the PISO-DA2U can be set to ±10 V, ±5 V, 0 to 10 V, or 0 to 5 V, and the current output range can be either 0 to 20 mA or 4 to 20 mA.

In addition, the PISO-DA2U also features the following innovative advantages:

#### 1. Accurate and easy-to-use calibration:

ICP DAS provides a software calibration function rather than manual calibration so that jumpers and trim-pots are no longer required for calibration, and the calibration data can be saved in the EEPROM for long-term use.

#### 2. Channel-to-channel configuration:

Each channel can be individually configured as either voltage or current output and can be set to a different output range.

#### 3. Card ID:

ICP DAS has also included an onboard Card ID switch on the PISO-DA2U that enables the board to be recognized via software if two or more boards are installed in the same computer.

# PISO-DA4U/DA8U/DA16U

Universal PCI, 14-bit, 4/8/16-channel Isolated Analog Output Board

## Features ►►►

- Universal PCI (3.3 V/5 V) Interface
- 14-bit, 4/8/16-channel Analog Output
  - 2500 V<sub>DC</sub> Bus and Power Isolation Protection
  - Built-in DC/DC Converter with 3000 V<sub>DC</sub> Protection
  - Software Calibration
  - Two Timer-triggered Interrupt Sources
- Double-buffered DA Latch
- Supports Card ID (SMD Switch)
- 16-channel 5 V/TTL Digital Output
- 16-channel 5 V/TTL Digital Input
  - Pull-high and Pull-low Function for DI Channels

## Introduction

The PISO-DA4U/DA8U/DA16U card is designed as an easy replacement for the PIO-DA4/DA8/DA16 without requiring any modification to the software or the driver.

The PISO-DA4U/DA8U/DA16U series provides an additional high-voltage isolation design that protects the Host PC from damage due to unexpected power surges, while the built-in high-quality isolation components provide the boards with 2500 V<sub>DC</sub> bus-type isolation. The voltage output range for the PISO-DA4U/DA8U/DA16U series is from -10 V to +10 V, and the current output range is from 0 to 20 mA.

In addition, the PISO-DA4U/DA8U/DA16U series also features the following innovative advantages:

### 1. Accurate and easy-to-use calibration:

ICP DAS provides a software calibration function rather than manual calibration so that jumpers and trim-pots are no longer required for calibration, and the calibration data can be saved in the EEPROM for long-term use.

### 2. Individual channel configuration:

Each channel can be individually configured as either voltage or current output.

### 3. Card ID:

ICP DAS has also included an onboard Card ID switch on the PISO-DAxU series that enables the board to be recognized via software if two or more boards are installed in the same computer.

## PISO-1730U

Universal PCI, 32-channel Optically-isolated Digital Input and 32-channel Optically-isolated Open-collector Digital Output Board (Sink, NPN)

### Features ►►►

- Universal PCI (3.3 V/5 V) Interface
- 32 Optically-isolated Digital Input Channels
- 32 Optically-isolated Digital Output Channels (Sink, NPN)
- Built-in DC/DC Converter with 3000 V<sub>DC</sub> Isolation
- 3750 V<sub>rms</sub> Photo-isolation Protection
- Four Isolated Banks
- Supports Card ID (SMD Switch)

3

4

### Introduction

The PISO-1730U card offers 32 optically-isolated Digital Input channels and 32 optically-isolated Digital Output channels, arranged into four isolated banks. Each input channel uses a photocoupler, while each output channel contains a Darlington transistor. Both the output port and the input port should use an external power supply. The board eliminates ground-loop problems and isolates the host computer from potentially damaging voltage spikes.

The PISO-1730U card also includes an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.

## PISO-P32C32U/PISO-P32C32U-5V

Universal PCI, 32-channel Optically-isolated Digital Input and 32-channel Optically-isolated Open-collector Digital Output Board (Sink)

### Features ►►►

- Universal PCI (3.3 V/5 V) Interface
- 32 Optically-isolated Digital Input Channels
- 32 Optically-isolated Digital Output Channels (Sink, NPN)
  - Supports DO Status Readback (Register Level)
- 3750 V<sub>rms</sub> Photo-isolation Protection
- Four Isolated Banks
- Built-in DC/DC Converter with 3000 V<sub>DC</sub> Isolation
- Supports Card ID (SMD Switch)

### Introduction

The PISO-P32C32U/P32C32U-5V card features 32 optically isolated Digital Input channels and 32 optically isolated Digital Output channels, arranged into four isolated banks. Each input channel uses a photocoupler, while each output channel contains a Darlington transistor. Either an external power supply or an isolated internal power supply from the PC via a DC/DC converter can be used for the input port, which is selected via a jumper, whereas the output port should use an external power supply. The board eliminates ground-loop problems and isolates the host computer from potentially damaging voltage spikes.

The PISO-P32C32U/P32C32U-5V cards also include an onboard Card ID switch (version 1.1 or above) that enables the board to be recognized via software if two or more boards are installed in the same computer.

The PISO-P32C32U-5V uses lower input impedance that is suitable for 5 V signal applications, while the PISO-P32C32U uses higher input impedance that is suitable for 12 or 24 V signal applications and produces less heat.

- 32 Optically-isolated Digital Input Channels
- 32 Optically-isolated Digital Output Channels (Source, PNP)
- Supports DO Status Readback (Register Level)

- 3750 V<sub>rms</sub> Photo-isolation Protection
- Built-in DC/DC Converter with 3000 V<sub>DC</sub> Isolation
- Supports Card ID (SMD Switch)

### Introduction

The PISO-P32A32U/P32A32-5V card features 32 optically-isolated Digital Input channels and 32 optically-isolated Digital Output channels, arranged into four isolated banks.

Each Digital Output channel includes a PNP transistor and an integral suppression diode for the inductive load. Isolated input channels 0 - 15 are allocated to Group A, while channels 16 - 31 are allocated to Group B. Isolated output channels are allocated to Groups C and D. The photocoupler input for the PISO-P32A32-5V can be powered by using either an internal current source or an external power supply, while the input for the PISO-P32A32U operates using an external power supply only.

The PISO-P32A32U/P32A32-5V cards also include an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.

The PISO-P32A32-5V uses lower input impedance that is suitable for 5 V signal applications, while the PISO-P32A32U uses higher input impedance that is suitable for 12 or 24 V signal applications and produces less heat.

## PISO-P32S32WU

Universal PCI, 32-channel Optically-isolated Digital Input and 32-channel Optically-isolated Open-collector Digital Output Board (Sink)

### Features ►►►

- Universal PCI (3.3 V/5 V) Interface
- Supports Card ID (SMD Switch)
- 3750 V<sub>rms</sub> Photo-isolation Protection
- Input Range up to 30 V<sub>DC</sub>

- 32 Optically-isolated Digital Input Channels
- 32 Optically-isolated Digital Output Channels (Sink, NPN)
- 100 mA (24 Channels) Low Driving
- 500 mA (8 Channels) High Driving

### Introduction

PISO-P32S32WU card supports both 3.3 V and 5 V PCI slots and provides 32 optically-isolated Digital Input channels and 32 optically-isolated open-collector Digital Output channels (8 channels for 500 mA and 24 channels for 100 mA current sinking output, NPN), arranged into four isolated banks. Each Digital Input channel uses a photocoupler to isolate the card and the computer from external signals, while each Digital Output channel includes an NPN transistor and an integral suppression diode for the inductive load. The PISO-P32S32WU requires an external power supply to drive the DI and DO ports, and supports Card ID (jumper) features for multi-board identification if two or more boards are installed in the same computer.

The board interfaces to field logic signals, eliminating ground-loop problems and isolating the host computer from potentially damaging voltage spikes.

PISO-P32S32WU contains a single 37-pin D-sub connector and a single 40-pin male header. A 40-pin to DB-37 flat cable is used to fix with the case. The digital signal can be connected through the second D-sub connector, and each D-sub connector supports 16 input and 16 output channels.

- 3750 V<sub>rms</sub> Photo-isolation Protection
- Built-in DC/DC Converter with 3000 V<sub>DC</sub> Isolation

- 64-channel Optically-isolated Digital Input
  - Jumper-selectable Internal or External Power Source for DI
  - 4 Isolated Banks when using 4 Isolated External Power Supplies

## Introduction

3

4

The PISO-P64U/P64U-24V Universal PCI card supports the 3.3 V/5 V PCI bus and provides 64 optically-isolated Digital Input channels. Either an internal or an external power supply can be used, which can be selected via a jumper. The internal power is provided by an onboard isolated DC/DC converter that provides 3000 V<sub>DC</sub> isolation and is used for connecting dry-contact input devices. The Digital Input channels are arranged into four isolated banks when using four isolated external power supplies. DI channels 0 - 15 are allocated to Bank A, DI channels 16 - 31 are allocated to Bank B, DI channels 32 - 47 are allocated to Bank C, and DI channels 48 - 63 are allocated to Bank D.

The onboard photocouplers provide 3750 V<sub>rms</sub> isolation, and act as an interface to field logic signals, eliminate ground-loop problems, and isolate the host computer from potentially damaging voltage spikes. The PISO-P64U/P64U-24V card contains a single DB-37 connector and a single 40-pin male header, each supporting 32 input channels.

The PISO-P64U/P64U-24V card also includes an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.

PISO-P64U-24V CR	Universal PCI, 64-channel Optically-isolated Digital Input (Logic High: +20 ~ +28 V) Board (RoHS). Includes one CA-4037B cable and two CA-4002 D-sub Connectors

## PISO-C64U/PISO-A64

Universal PCI/PCI, 64-channel Optically-isolated Digital Output Board (Sink/Source)

### Features ►►►

- PISO-C64U: Universal PCI (3.3 V/5 V) Interface
  - 64-channel Optically-isolated Open-collector Digital Output
  - Current Sinking, NPN type
  - Supports Card ID (SMD Switch)
  - Supports DO Status Readback (Register Level)

PISO-C64U

PISO-A64

- PISO-A64: PCI (5 V) Interface
  - 64-channel Optically-isolated Open-collector Digital Output
  - Current Sourcing, PNP type
  - 3750 V<sub>rms</sub> Photo-isolation Protection
  - 4 Isolated Banks when using 4 Isolated External Power Supplies

### Introduction

The PISO-C64U Universal PCI card supports the 3.3 V/5 V PCI bus while the PISO-A64 only supports the 5 V PCI bus. These cards provide 64 optically-isolated Digital Output channels, each of which includes a PNP transistor (PISO-A64) or a Darlington transistor (PISO-C64U) and an integrated suppression diode for the inductive load.

The Digital Output channels are allocated to four isolated banks when using four isolated external power supplies, and act as an interface to field logic signals, eliminating ground-loop problems, and isolating the host computer from potentially damaging voltage spikes. The open-collector Digital Output channels are typically used for alarm and warning notifications, signal output control, control for external circuits that require a higher voltage level, or signal transmission applications, etc.

The PISO-C64U card also includes an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer. Both cards contain a single DB-37 connector and a single 40-pin male header, each supporting 32 output channels.

- 3750  $V_{rms}$  Photo-isolation Protection
- Supports Card ID (SMD Switch)
- Supports DO Status Readback (Register Level)
- 2 Interrupt Sources

3

4

### Introduction

The PISO-730U/730U-5V cards provide 32 isolated Digital I/O channels (16 x DI and 16 x DO) and 32 TTL-level Digital I/O channels (16 x DI and 16 x DO). Both the isolated Digital Input and the Digital Output channels use a short optical transmission path to transfer an electronic signal between the elements of a circuit and keep them electrically isolated. With 3750  $V_{rms}$  isolation protection, the DI/O channels allow the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes.

Each Digital Output includes a Darlington (NPN) transistor and an integrated suppression diode for the inductive load. The open-collector Digital Output channels are typically used for alarm and warning notifications, signal output control, control for external circuits that require a higher voltage level, or signal transmission applications, etc.

The PISO-730U/730U-5V cards also include an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.

## PCI-P8R8U/PCI-P16R16U NEW

Universal PCI, 8/16-channel Isolated Digital Input and 8/16-channel Relay Output Board

PCI-P8R8U

PCI-P16R16U

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 8/16-channel Optically-isolated Digital Input
- 8/16-channel Relay Output
- Selectable DC Signal Input Filter
- AC Signal Input with Filter
- 5000 V<sub>rms</sub> Photo-isolation Protection

### 3 Introduction

The PCI-P8R8U/P16R16U Universal PCI card supports the 3.3 V/5 V PCI bus and provides 8 or 16 optically-isolated Digital Input channels and 8 or 16 Relay Output channels. The DI channels provide 5000 V<sub>rms</sub> isolation protection that allows the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes. The Relay Output channels can be used where it is necessary to control a circuit using a low-power signal, with complete electrical isolation between the control and the controlled circuits, or where several circuits need to be controlled by a single signal.

## PCI-P16C16

PCI Bus, 16-channel Isolated Digital Input and 16-channel Open-collector Digital Output Board (Sink, NPN)

### Features >>>

- PCI (5 V) Interface
- 16-channel Optically-isolated Digital Input
- 16-channel Open-collector Digital Output (Sink, NPN)
- Selectable DC Signal Input Filter
- AC Signal Input with Filter
- External Power Status LED Indicator

### Introduction

The PCI-P16C16 is a 5 V PCI card that support Plug & Play functionality for automatic allocation of I/O resources from the BIOS. The card provides 16 optically-isolated Digital Input channels and 16 open-collector (Sink, NPN) Digital Output channels. The DI channels provide 5000 V<sub>rms</sub> isolation protection that allows the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes. The open-collector DO channels are typically used for alarm and warning notifications, control of signal output, control of external circuits that require a higher voltage level, or signal transmission applications, etc. The PCI-P16C16 contains a single DB-37 connector and a single 40-pin box header, and includes a 40-pin to DB-37 flat cable for easy wiring.

## PCI-P16POR16U NEW

Universal PCI, 16-channel Isolated Digital Input and  
16-channel PhotoMOS Relay Output Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- LED Power Indicator
- 16-channel Optically-isolated Digital Input
  - 5000 V<sub>rms</sub> Photo-isolation Protection
  - Selectable DC Signal Input Filter
  - AC Signal Input with Filter

- High-speed DI/O Operation
- 16-channel PhotoMOS Relay Output
  - Long-life, High-reliability PhotoMOS Relay
  - Low leakage current when PhotoMOS Relay is OFF
  - No Acoustical Noise
  - No Contact Bounce or Sparking

### Introduction

The PCI-P16POR16U Universal PCI card supports the 3.3 V/5 V PCI bus and provides 16 optically-isolated Digital Input channels and 16 PhotoMOS Relay Output channels. Both the isolated DI channels and the PhotoMOS Relay channels use a short optical transmission path to transfer an electronic signal between elements of a circuit and keep them electrically isolated.

The PCI-P16POR16U provides 5000 V<sub>rms</sub> isolation protection for the DI channels, allowing the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes. The PhotoMOS Relays are used where it is necessary to control a circuit using a low-power signal, with complete electrical isolation between the control and the controlled circuits), or where several circuits must be controlled by a single signal.

This card can be used in a variety of applications, such as controlling the ON/OFF state of external devices, driving external relays or small power switches, activating alarms, contact closure, or sensing external voltages or switches, etc.

The PCI-P16POR16U cards also include an onboard Card ID switch that enables the board to be recognized via software if two or more cards are installed in the same computer. The PCI-P16POR16U is designed as a direct replacement for the PCI-P16POR16 without requiring any modification to the software or the driver.

## PISO-P8R8U/PISO-P8SSR8AC/PISO-P8SSR8DC

Universal PCI/PCI, 8-channel Isolated Digital Input and 8-channel Electromechanical/Solid-state Relay Output Board

### Features >>>

- PISO-P8R8U: Universal PCI (3.3 V/5 V) Interface
  - Supports Card ID (SMD Switch)
  - 8-channel Electromechanical Relay Output
- PISO-P8SSR8AC/P8SSR8DC: PCI (5 V) Interface
  - 8-channel Solid-state Relays (SSR) Output
  - Decreased Electrical Noise During Relay Switching
- 8-channel Optically-isolated Digital Input
  - AC Signal Input with Filter
  - Selectable DC Signal Input Filter
- 5000 V<sub>rms</sub> Photo-isolation Protection
- Onboard Relay Output Status LED Indicators

### Introduction

The PISO-P8R8U Universal PCI card supports the 3.3 V/5 V PCI bus while the PISO-P8SSR8AC/P8SSR8DC card supports the 5 V PCI bus, and offers 8 optically-isolated Digital Input channels and 8 electromechanical Relay or 8 solid-state Relay Output channels. The DI channels provide 5000 V<sub>rms</sub> isolation protection that allows the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes. The Relay Output channels are used where it is necessary to control a circuit using a low-power signal, with complete electrical isolation between the control and the controlled circuits, or where several circuits must be controlled by a single signal.

The PISO-P8R8U/PISO-P8SSR8AC/P8SSR8DC can be used in a variety of applications, such as controlling the ON/OFF state of external devices, driving external relays or small power switches, activating alarms, contact closure, or sensing external voltages or switches, etc.

The PISO-P8R8U cards also include an onboard Card ID switch that enables the board to be recognized via software if two or more PISO-P8R8U cards are installed in the same computer. The PISO-P8R8U is designed as a direct replacement for the PISO-P8R8 without requiring any modification to the software or the driver.

## PISO-P16R16U

Universal PCI, 16-channel Isolated Digital Input and  
16-channel Relay Output Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- Supports Card ID (SMD Switch)
- 16-channel Relay Output
- 16-channel Optically-isolated Digital Input
- 3750 V<sub>rms</sub> Photo-isolation Protection
- Selectable DC Signal Input Filter
- AC Signal Input with Filter

### 3 Introduction

The PISO-P16R16U is a Universal PCI card supporting both the 3.3 V and 5 V PCI bus, and contains 16 photocoupler Digital Input channels that provide 3750 V<sub>rms</sub> isolation protection, allowing the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes. The cards are also equipped with 16 Relay Output channels to enable the control of the ON/OFF state of external devices, drive external relays or small power switches, or activate alarms, etc.

The PISO-P16R16U card is fully compatible with the PISO-P16R16 card, and is designed as a direct replacement without requiring any modification to the software or the driver.

|--|---|
| <ul style="list-style-type: none"> <li>■ PCI (5 V) Interface</li> <li>■ 8-channel Electromechanical Relay Output</li> <li>□ Supports Relay Output Status Readback</li> <li>□ Onboard Relay Output Status LED Indicators</li> </ul> | <ul style="list-style-type: none"> <li>■ 8-channel Optically-isolated Digital Input</li> <li>□ 3750 V<sub>rms</sub> Photo-isolation Protection</li> <li>□ State-changed Interrupt for all Digital Inputs</li> <li>□ Jumper-selectable Isolated or Non-isolated Digital Input</li> </ul> |
|--|---|

### Introduction

The PISO-725 card supports the 5 V PCI bus, and provides 8 isolated or non-isolated Digital Input channels and 8 electromechanical Relay Output channels. The DI channels can be set to either isolated or non-isolated via a hardware jumper, and each channel will generate an interrupt signal if the state is changed, which is very useful when monitoring contact openings/closures as it is not necessary to continuously poll the inputs. The isolated DI channels use a short optical transmission path to transfer an electronic signal between elements of a circuit and keep them electrically isolated. With 3750 V<sub>rms</sub> isolation protection, the DI channels allow the input signals to be completely floated so as to prevent ground loops and isolate the host computer from potentially damaging voltage spikes.

The Relay Output channels are used where it is necessary to control a circuit using a low-power signal, with complete electrical isolation between the control and the controlled circuits, or where several circuits must be controlled by a single signal. All relays are de-energized (switched off) during power-on, and support ON/OFF status read back.

The PISO-725 can be used in a variety of applications, including contact closure, external voltage sensing, load sensing and I/O control, etc.

## PCI-D64HU

Universal PCI, 40 MB/s High-speed 32-channel DI and  
32-channel DO Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 32-channel, 5 V/TTL Digital Output
- Data Transfer Rate up to 40 MB/s for each DMA Channel
- Onboard 1 k/2 k DWORD FIFO for DI/DO, respectively
- DO FIFO Supports Ring Buffer Mode
- No Bus Loading in Repetitive Pattern Generation Applications
- 32-channel, 5 V/TTL Digital Input
- 2-channel Bus Mastering Scatter/Gather
- 8-channel Optically-isolated Digital Input
- Data Transfer Modes:
  - Direct Program Control, Internal Timer Pacer
  - External Clock (DI only), Handshaking

### Introduction

The PCI-D64HU is a high-speed digital I/O card containing 32 Digital Input channels and 32 Digital Output channels. The high-performance design makes this card perfect for high-speed data transfer and pattern generation applications.

The PCI-D64HU performs high-speed data transfer using a bus-mastering DMA via the 32-bit PCI bus, with a maximum data transfer rate of up to 40 MB per second. A variety of digital I/O transfer modes are supported, including direct programmed I/O control, timer pacer control, external clock mode and handshaking mode.

The PCI-D64HU also features a programmable digital filter for all input signals, including handshaking and trigger signals. The PCI-D64HU is a reliable and cost-effective interface that can be used to control any high-speed peripherals connected to your computer system.

### Software

#### Drivers

32-bit Windows 2000/XP/2003/2008/Vista/7/8

#### Sample Programs

VB/VC/BCB Demo

### Hardware Specifications

#### Digital Input

Channels	32
Compatibility	5 V/TTL
Input Voltage	Logic 0: 0.8 V Max., Logic 1: 2.0 V Min.
Handshaking Signals	I_REQ Input , I_ACK Output , I_TRG Input

#### Digital Output

Channels	32
Compatibility	5 V/TTL
Output Voltage	Logic 0: 0.55 V Max., Logic 1: 2.0 V Min.
Output Capability	Sink: 64 mA @ 0.55 V, Source: 32 mA @ 2.0 V
Handshaking Signals	O_REQ Output, O_ACK Input, O_TRG Output
Transfer Speed	40 MB/s (Max.) for DI and DO simultaneously

#### Timer/Counter

Channels	3
Resolution	16-bit
Input Frequency	2.5 ~ 20 MHz
Timer 0	DI Clock Source
Timer 1	DO Clock Source
Timer 2	Base Clock for Timer 0 and Timer 1

#### Interrupts

Sources O\_ACK, I\_REQ, Timer 0, Timer 1 and Timer 2

#### Onboard FIFO

Size	1 k DWORD (32-bit) for DI 2 k DWORD (32-bit) for DO
Size in Ring Buffer Mode	2 ~ 2 k DWORD (32-bit), DO only

#### General

Bus Type	3.3 V/5 V Universal PCI, 32-bit, 33 MHz
Connectors	Female DB37 x 1, 40-pin Box Header x 1
Power Consumption	200 mA @ +5 V Typical (no output load)
Operating Temperature	0°C to +60°C
Humidity	5 to 85% RH, Non-condensing

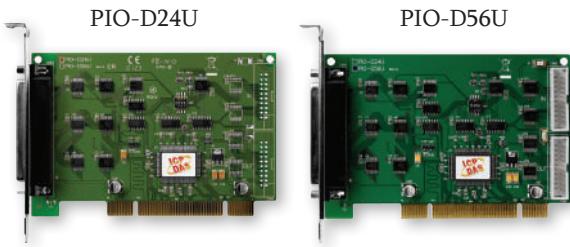

### Ordering Information

PCI-D64HU CR

Universal PCI, 40 MB/s High-speed 32-channel DI and 32-channel DO (RoHS). Includes one CA-4037W cable and two CA-4002 D-sub connectors.

## PIO-D24U/PIO-D56U

Universal PCI, 24/56-channel Digital I/O Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 24/56 Buffered TTL Digital I/O Lines
- Three 8-bit Bi-directional Programmable I/O Ports
- Emulates two Industrial-standard 8255 PPI Ports (Mode 0)
- 4-channel Interrupt Source
- Supports Card ID (SMD Switch)
- Supports DO Status Readback (Register Level)
- DI/O Response Time approximately 1  $\mu$ s (1 MHz)

### Introduction

The PIO-D24U/D56U cards are designed to be fully compatible with PIO-D24/D56 boards. The PIO-D24U/D56U series can be used as a direct replacement for PIO-D24/D56 boards without requiring any modification to the software or the driver.

PIO-D56U CR	Universal PCI, 56-channel Digital I/O Board (RoHS).

## PIO-D48U/PIO-D48SU

Universal PCI, 48-channel Digital I/O Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 48 Buffered TTL Digital I/O Lines
- Six 8-bit Bi-directional Programmable I/O Ports
- Emulates two Industrial-standard 8255 PPI Ports (Mode 0)
- All I/O Lines Buffered on the Board
- 4-channel Interrupt Source
- Supports Card ID (SMD Switch)
- Supports DO Status Readback (Register Level)
- Buffer Output for Higher Driving Capability
- DI/O Response Time approximately 1 µs (1 MHz)

PIO-D48U

PIO-D48SU

### Introduction

The PIO-D48U/D48SU card is designed to be fully compatible with the PIO-D48, meaning that a PIO-D48 card can be directly replaced with a PIO-D48U/D48SU without requiring any modification to the software or the driver.

The PIO-D48U provides two connectors for I/O wiring, while the PIO-D48SU provides a single high-density connector that reduces the amount of installation space required for the card in the computer.

The PIO-D48U/D48SU supports the 3.3 V/5 V PCI bus, and provides 48 TTL Digital I/O lines that are grouped into six 8-bit bi-directional ports. Each group of three 8-bit ports is arranged on the connector as Port A (PA), Port B (PB) and Port C (PC), and Port C can be split into two nibble-wide (4-bit) parts. All ports are configured as inputs on power-up or after a reset.

The PIO-D48U/D48SU card also includes an onboard Card ID switch and pull-high/low resistors for the Digital Input. The Card ID switch can be set so that the board is able to be recognized via software if two or more boards are installed in the same computer. The pull-high/pull-low resistors allow the DI status to be predefined as either high or low instead of remaining floating if the DI channels are disconnected or interrupted.

### Hardware Specifications

## PIO-D64U

Universal PCI, 64-channel Digital I/O Board with Timer/Counter

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 32-channel Digital Input
- 32-channel Digital Output
- Interrupt Trigger via Event/Timer Trigger
- 3 Independent Programmable 16-bit Down Counters
- Supports Card ID (SMD Switch)
- Programmable Interrupt Handling
- DI/O Response Time approximately 1  $\mu$ s (1 MHz)

### Introduction

The PIO-D64U card is designed as a direct replacement for the PIO-D64 without requiring any modification to the software or the driver.

## PIO-D96U/PIO-D96SU

Universal PCI, 96-channel Digital I/O Board

### Features >>>

- Universal PCI (3.3 V/5 V) Interface
- 96-channel Digital I/O
- Twelve 8-bit Bi-directional Programmable I/O Ports
- All I/O Lines Buffered on the Board
- 4-channel Interrupt Source
- Buffer Output for Higher Driving Capability
- Supports Card ID (SMD Switch)
- DI/O Response Time approximately 1 µs (1 MHz)

### Introduction

The PIO-D96U/D96SU card is designed as a direct replacement for the PIO-D96, without requiring any modification to the software or the driver.

The PIO-D96U provides four connectors for I/O wiring, while the PIO-D96SU provides a single high-density connector that reduces the amount of installation space required for the card in the computer.

The PIO-D96U/D96SU Universal PCI card supports the 3.3 V/5 V PCI bus, and provides 96 TTL Digital I/O lines that consist of twelve 8-bit bi-directional ports. Each group of three 8-bit ports is arranged on the connector as Port A (PA), Port B (PB) and Port C (PC), respectively, and all ports are configured as inputs on power-up or after a reset.

The PIO-D96U/D96SU card also includes an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.

## Introduction

The PIO-D144U/D144LU/D168U cards are designed as direct replacements for PIO-D144/D168 cards without requiring any modification to the software or the driver.

The PIO-D144U/D144LU/D168U Universal PCI cards support the 3.3 V/5 V PCI bus, and provide 144/168 TTL Digital I/O lines that are grouped into 18/21 8-bit bi-directional ports. Each group of three 8-bit ports is arranged on the connector as Port A (PA), Port B (PB) and Port C (PC), respectively, and all ports are configured as inputs Channels on power-up or after a reset.

The PIO-D144U uses 5V/TTL to provide high DO driving capability. The PIO-D144LU uses 5V/CMOS to provide low power consumption and producing less heat.

The PIO-D144U/D144LU/D168U cards also include an onboard Card ID switch that enables the board to be recognized via software if two or more boards are installed in the same computer.

## Software

### Drivers

- 32/64-bit Windows XP/2003/2008/Vista/7/8
- Linux

DASYLab

### Sample Programs

- DOS Lib and TC/BC/MSC Demo
- VB/VC/Delphi/BCB/VB.NET/C#.NET/VC.NET/MATLAB Demo
- LabVIEW Toolkit

## Hardware Specifications

Models	PIO-D144LU	PIO-D144U	PIO-D168U
<b>Programmable DIO</b>			
Channels	144		168
<b>Digital Input</b>			
Compatibility	5 V/CMOS	5 V/TTL	
Input Voltage	Logic 0 0.8 V Max. Logic 1 2.0 V Min.		
Response Speed	1 MHz		
<b>Digital Output</b>			
Compatibility	5 V/CMOS	5 V/TTL	
Output Voltage	Logic 0 0.1 V Max. Logic 1 4.4 V Min.	0.4 V Max. 2.4 V Min.	
Output Capability	Sink 6 mA @ 0.33 V	64 mA @ 0.8 V	Source 6 mA @ 4.77 V
Response Speed	1 MHz	32 mA @ 2.0 V	
<b>General</b>			
Bus Type	3.3 V/5 V Universal PCI, 32-bit, 33 MHz		
Card ID	Yes (4-bit)		
Connectors	Female DB37 x 1, 50-pin Box Header x 5		Female DB-37 x 1, 50-pin Box Header x 6
Power Consumption	250 mA @ +5 V	600 mA @ +5 V	1300 mA @ +5 V
Operating Temperature	0°C to +60°C		
Humidity	5 to 85% RH, Non-condensing		

## Ordering Information

PIO-D144U CR	Universal PCI, 144-channel Digital I/O Board (5 V/TTL, RoHS).
PIO-D144LU CR	Universal PCI, 144-channel Digital I/O Board (5 V/CMOS, RoHS).
PIO-D168U CR	Universal PCI, 168-channel Digital I/O Board (RoHS)

## PCI-TMC12A

PCI Bus, 12-channel Timer/Counter Board with Digital I/O

### Features ►►►

- PCI (5 V) Interface
- 4 Onboard 8254 Timer/Counter Chips
- 12 Independent 16-bit Timers/Counters
- 12 External Clock Input Channels
- 12 Timer/Counter Output Channels
- 4 Interrupt Sources
- 16-bit Timer/Counter can be cascaded to create a 32/48-bit Timer/Counter
- 16-channel, 5 V/TTL Digital Input and 16-channel, 5 V/TTL Digital Output
- Gate Input can be sourced from External or Previous Timer/Counter Output
- 2 Internal Clock Sources
- More Flexible Interrupt Mechanism
- Hardware Mechanism to generate two Starting Clocks

### Introduction

The PCI-TMC12A is a general purpose timer/counter card that supports the 5 V PCI bus and "Plug & Play" functionality to automatically obtain I/O resources from the BIOS. This card contains twelve 16-bit timers/counters (four 82C54 chips x 3 timers/counters), 16 TTL Digital Input channels and 16 TTL Digital Output channels. The two onboard clocks (8 M/1.6 M and 0.8 M/80 K) are jumper selectable and provide a high-resolution clock source for timers/counters. Counters/timers can be used for industrial and laboratory applications such as pulse/event/switch-toggle counting, frequency readings, elapsed time measurement, pulse-width measurement, PWM (pulse-width-modulated) output, and pulse (square wave) and rate generation, etc.

### Software

#### Drivers

- 32/64-bit Windows XP/2003/2008/Vista/7/8
- Linux

#### Sample Programs

- DOS Lib and TC Demo
- LabVIEW Toolkit
- VB/VC/Delphi/BCB/MATLAB Demo
- VB.NET/C#.NET/VC.NET Demo

### Hardware Specifications

#### Digital Input

Channels	16
Compatibility	5 V/TTL
Input Voltage	Logic 0: 0.8 V Max. Logic 1: 2.0 V Min.
Response Speed	2.0 MHz (Typical)

#### Digital Output

Channels	16
Compatibility	5 V/TTL
Output Voltage	Logic 0: 0.4 V Max. Logic 1: 2.4 V Min.
Output Capability	Sink: 24 mA @ 0.8 V Source: 15 mA @ 2.0 V
Response Speed	2.0 MHz (Typical)

#### Timer/Counter

Channels	12 (Independent x 12)
Resolution	16-bit
Input Frequency	10 MHz Max.
Reference Clock	Internal: 8 MHz

#### General

Bus Type	5 V PCI, 32-bit, 33 MHz
Card ID	Yes (4-bit)
Connectors	Female DB37 x 1 20-pin Box Header x 2
Power Consumption	500 mA @ +5 V
Operating Temperature	0°C to +60°C
Humidity	5 to 85% RH, Non-condensing
